

## **22-23) STEM-Focused Learning Design Support**

Other

Colleges of Agricultural Science, Earth and Mineral Science, Engineering, and Information Sciences and Technology, and Science

Ann H. Taylor, 814-863-9070, atb3@psu.edu

College-based learning design units such as ours work in close partnership with faculty and staff to support a wide variety of teaching and learning needs, whether those are focused on traditional Penn State students, online learners, or members of the broader local or even global community.

Representing teams of learning design, multimedia, and web-based technology specialists, we are here to support the improvement of teaching and learning by applying the latest in learning science research and technology. We have extensive experience in helping faculty to extend the reach of a high-quality, rigorous, and research-based Penn State education around the globe through the collaborative development of online resources, courses, and certificate and degree programs. We would love to help you achieve your broader impact goals!
